                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC The invention relates to an isolated human transporter protein that is CC related to the zinc transporter subfamily. Polynucleotides and CC polypeptides of the invention are useful for treating a disease or CC condition mediated by human transporter protein. The proteins also CC provide a target for diagnosing a disease or predisposition to disease CC mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, CC inappropriate or unwanted expression of the protein. The nucleic acids CC are also useful in drug screening assays and as a target for treatment CC by the compounds identified through drug screening. The invention also CC provides vectors for gene therapy in patients with aberrant expression CC of the gene encoding the transporter protein. The gene of the invention CC has been found to be expressed in humans in the kidney, testis, heart, CC placenta, small intestine and liver. The gene has been localised to CC numan chromosome 1. The current sequence represents the human transporter protein encoding cDNA.

The invention relates to human transporters and ion channels (TRICH) CC and their corresponding nucleic acid sequences. TRICH is useful for Screening an agonist/antagonist that modulates its activity. TRICH is call useful as an immunogen for preparing antibodies which are useful for CC diagnosing a condition of disease associated with its expression in a CC subject, and for detecting and purifying it from a sample. TRICH DNA CC is useful as probe or a primer for assessing toxicity of a test CC compound. Composition comprising TRICH or its agonist is useful for treating a disease or condition associated with decreased expression CC of functional TRICH and composition comprising TRICH antagonist is CC useful for treating a disease or condition associated with TRICH antagonist is CC useful for treating a disease or condition associated with TRICH CC everexpression of TRICH. TRICH sequence is used in the diagnosis and CC treatment of transport disorder e.g. diabetes mellitus, angina, Alphahmer's disease, bacterial and viral meningitis, muscle disorder e.g. myocarditis, infectious myositis, arrhythmias, asthma, CC immunological disorder e.g. acquired immunodeficiency syndrome (AIDS), allergies, atherosclerosis; and cell proliferative disorders e.g. cirrhosis, hepatitis, psoriasis and cancers. TRICH DNA is used in the manised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Lee EA, Yue H, Lal PG,

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as years a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primers ere useful for synthesising polynucleotides, and in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB13633 to AAH18742 represent human calid sequences; and AAH3629 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                             The present invention describes primer sets for synthesising 5602 (C full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary ctrand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence complementary to a CP polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 1 least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primer sare useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB95893 represent human amino acid sequences; AAB92446 to AAH3633 controlled the controlled that all of which are used in the sequentification.

                                δÃ
                                                                     밁
                                                                                                    δõ
                                                                                                                                                                                                               sequence and an oligonucleotide comprising a sequence complementary to a coligonucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are lost useful for the cDNAs encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH3633 to AAH18742 represent human cDNA sequences; AAB92446 to AAH3633 represent buman amino acid sequences; and AAH13629 to AAH13632 represent prigonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                          Matches 521;
                                                                                                                                                         Query Match

Claim 4(b); Fig 3; 75pp; English.

The invention relates to an isolated human transporter protein that is CC related to the zinc transporter subfamily. Polynucleotides and CC polypeptides of the invention are useful for treating a disease or CC condition mediated by human transporter protein. The proteins also CC provide a target for diagnosing a disease or predisposition to disease CC mediated by the peptide, and in pharmacogenomic analysis. The peptides CC are also useful for treating a disorders characterised by absence of, CC inappropriate or unwanted expression of the protein. The nucleic acids CC are also useful in drug screening assays and as a target for treatment CC by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression CC provides vectors for gene therapy in patients with aberrant expression CC provides vectors for gene therapy in patients with aberrant expression CC provides vectors for gene therapy in patients with aberrant expression CC placenta, small intestine and liver. The gene has been localised to thuman chromosome 1. The current sequence represents the human transporter correction encoding damage current sequence represents the human transporter correction encoding damage current sequence represents the human transporter correction encoding damage current sequence represents the human transporter correction encoding damage current sequence represents the human transporter correction. protein encoding genomic DNA.
Note: This sequence contains 6 single nucleotide polymorphisms (SNP's), but information given in the specification is insufficient to determine their locations within this sequence (see ABN83948-ABN83953 for specification). encoding genomic DNA. to determine 3 for specific transporter

P-PSDB; 2002-383182/41.

New cytoplasmic, nuclear, membrane bound and secreted NOVX polypeptides, useful for treating cancers and tumours, lung disorders, haematopoietic disorders, autoimmune diseases and immune disorders

Claim 9 Page 21; 210pp; English.

sclerosis and amyotropic lateral sclerosis), acute brain injury (e.g. stroke, head injury and cerebral palsy), central nervous system disorders (e.g. depression, epilepsy and schizophrenia), lung disorders, reproductive disorders, disorders affecting carbohydrate metabolism (e.g. galactosaemia and hereditary fructose intolerance), tissue disorders (e.g. Wiskott-aldrich syndrome, thrombocytopaenia, night blindness and pick's disease), disorders linked to abnormal angiogenesis, asthma, a vector comprising the nucleic acid; a cell comprising the vector; an anti-NOVX antibody; and identifying agents that modulate the expression or activity of NOVX. NOVX, the nucleic acid, antibody and modulators are useful in the diagnosis, treatment or prevention of developmental disorders, endocrine disorders, vascular disorders, infectious disease, anorexia, cancer, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, multiple modulation, gastrointesuma, regeneration, viral, bacterial or disorders, hepatitis, trauma, regeneration, viral, bacterial or infections, hyper- or hypo-thyroidism, endometriosis, fertility, infections, hyper- or hypo-thyroidism, endometriosis, fertility, infections, hyper- or hypo-thyroidism, endometriosis, ischaemia, haemolytic analization. migraines, inflammation, autoimmune disorders, disorders affecting sleep, appetite, thermoregulation, pain, perception, hormone secretion and sexual behaviour, immune disorders, haematopoietic disorders or other disorders related to cell signal processing and metabolic pathway modulation, gastrointestinal diseases, respiratory disorders, blood disorders, hepatitis, trauma, regeneration, viral, bacterial or parasitic hypertension, arteriosclerosis, ischaemia, haemolytic anaemia, Werner syndrome, rheumatoid arthritis, Grave's disease, wound healing, X-lin mental retardation, psychotic and neurological disorders and neuronal azoospermia, learning disabilities, facial dysmorphism, autoimmune encephalomyelitis, X-linked severe combined immunodeficiency, seizu NOV1a, NOV1b, NOV1ac, NOV2a, NOV2b, NOV2c, NOV3a, NOV3b, NOV4a, NOV4b, NOV5a, NOV5b or NOV6-NOV9 polypeptides, their mature form or variant. Also included are a nucleic acid encoding a NOVX protein or variant. degeneration. invention The relates to an isolated NOVX polypeptide selected from NOV1ac, NOV2a, NOV2b, NOV2c, NOV3a, NOV3b, NOV4a, NOV4b, present sequence encodes a NOVX protein seizures x-linked

diagnosing disorders or 84234 Isolated 47476, 67210, 49875, polypeptides, useful ng pain or metabolic, 46842, 33201, 83378, 84233, 64708, 8 as reagents or targets for treating liver, kidney, or cardiovascular

Claim 1; Page 236-237; 298pp; English.

CC an inability to clear infections (e.g., vital or bacterial infections), cc as well as disorders related to abnormal cellular proliferation or cc differentiation, e.g., leukaemia. They may also be used to control cc disorders of metabolic imbalance (e.g., disorders of lipopolysaccharide biosynthesis or glycogen synthesis) immunological disorders, cc cardiovascular disorders, neurological disorders, or cellular cc proliferation and/or differentiation disorders, e.g., cancer, cell cmothlity and adhesion disorders disorders (e.g., brain cell disorders, viral diseases, neurological disorders (e.g., brain clisty and adhesion of metabolic disorders disorders, kidney clisorders, protein trafficking disorders and disorders associated with bone metabolism. The sequences of the invention are also useful for screening assays, predictive medicine (e.g., diagnostic assays, This invention relates to the DNA and protein sequences of novel isolated 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 or 84234 proteins. The method of the invention is useful for treating a disorder characterised by aberrant activity of 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 or 84234-expressing cell in a 46842, 3701, 8378, 84233, 64708, 85041 or 84234-expressing cell in a subject. The protein molecules can act as novel diagnostic targets an therapeutic agents for controlling aberrant or deficient signal transduction resulting, in e.g., haematopoeitic disorders, including blood clotting disorders, autoimmune disorders, or disorders related ť

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1459

                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (1) con a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer. (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, use for detecting presence of prostate cancer, stage of prostate cancer
                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                   patient;
(I) is also useful as a pharmacodyanamic or pharmacogenomic

(e) selecting a composition for inhibiting prostate cancer in a patien
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastastized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a

                                                                                                                                                                                                                                                                                                                                                             cancer in a patient;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq
